EDUCATION

2023.09—2027.07	Chinese University of Hong Kong (Shenzhen)	Bachelor
- Mathematics and Applied Mathematics -- Financial Mathematics GPA: 3.52 / 4.00, Ranked 4th in the major - Member of Bachelor-PhD Program, Dean's List of School of Science and Engineering - Core Course: Machine Learning, Stochastic Processes, Optimization Models, Computer Programming (Python), Investment Portfolio Analysis, Value investment, Financial Computing, Econometrics		

INTERNSHIP EXPERIENCE

Changjiang Securities Research Institute (Shanghai) Convertible Bonds Analysis Intern	Jun 2025 - Sep 2025
Data Processing: Developed a convertible bond database tracking anti-excessive competition sectors including steel and photovoltaics. Sourced and processed key metrics from databases. Completed data cleaning and visualization through Excel. Thematic Research: Analyzed the evolution of bank CBs (2015--2025), covering 26 bank and over 1,000 market instruments. Identified valuation drivers and the shift from redemption to strategic conversion. Market Analysis: Researched the Hong Kong CB market and its financing drivers. Benchmarked advantages against Chinese USD bonds via Bloomberg, and evaluated strategies from bond allocation to Delta hedging.	

RESEARCH PROJECTS

Project 1 Amazon--Whole Foods DCF Valuation & M&A Analysis	Mar 2026 - Apr 2026
- Built a DCF model using 2012-2016 financials; forecasted 2017--2020 FCFF and estimated terminal value via the Gordon Growth Model; conducted sensitivity analysis. - Estimated intrinsic value at \$11.1B vs. \$13.7B acquisition price (27% premium); cross-validated with P/E multiples. - Attributed the premium to strategic synergies, including offline expansion and supply chain integration.	
Project 2 Risk Exposure Across Business Cycles & CAPM Extension	Feb 2026 - Mar 2026
- Constructed small-cap and large-cap portfolios using Fama--French data (1996--2025); estimated time-varying CAPM exposures via rolling regressions. - Using NBER cycles, found small-cap beta drops in recessions ($p=0.005$) while large-cap remains stable. - Modeled VIX interactions to capture beta sensitivity; proposed dynamic risk allocation across volatility regimes.	
Project 3 Research of China-US Cross-Border Statistical Arbitrage Strategy	Oct 2025 - Nov 2025
- Analyzed cross-market pricing inefficiencies between A-shares and ADRs; integrated daily price and FX data, aligned trading calendars, and constructed price spread panels. - Identified statistically significant mean-reversion and built a market-neutral strategy (long undervalued, short overvalued). - Backtested the strategy ; analyzed the impact of China's price limits, which widen spreads and constrain execution.	

COMPETITION EXPERIENCE

Kaggle Competition S&P500 Dynamic Asset Allocation Strategy	Oct 2025 -- Dec 2025
- Predicted S&P 500 excess returns using high-dimensional time-series features; generated daily dynamic positions (0--200%) to maximize risk-adjusted returns. - Processed 98 features; applied PCA and used LightGBM/XGBoost ensemble models; mapped signals to positions via a sigmoid function and optimized with Sharpe and volatility metrics. - Achieved a Sharpe ratio of 0.714 and outperformed the benchmark by 2.1%; ranked 0.655 on the Kaggle public leaderboard.	

EXTRACURRICULAR ACTIVITIES

3rd Place Sun Life Hong Kong Investment Fund Competition	Apr. 2026
Second Prize Guangdong Province of the China College Students' Mathematical Modeling Contest	Oct. 2025
Undergraduate Teaching Assistant Linear Algebra, Honors Calculus, ODE, etc.	Jun. 2024-Present
Captain, Women's Volleyball Varsity Team, The CUHKSZ	Apr.2024-Present
Protocol Volunteer 2024 National Swimming Championships	Sep. 2025

SKILLS & INTERESTS

Programming: Python, R, STATA, MATLAB, LaTeX	Language: English CET-6, GRE
Software: Bloomberg, Wind, iFind,Microsoft Office	Interests:Piano, Sketching, Basketball, Swimming, Handcrafts
